

Forward Hearts

Forward Hearts lets survivors of a sudden cardiac arrest event pay it forward and potentially save another life by donating an AED to the organization of the survivor's choice.

How it works:

When a LIFEPAK® CR2 AED, LIFEPAK CR® Plus, LIFEPAK EXPRESS®, or HeartSine samaritan® PAD is used to save a life*, the survivor chooses an organization to receive a donated AED. The survivor can choose to make their donation to the organization anonymously or be part of a public announcement.

If you have a Forward Hearts story, or know of someone who survived a sudden cardiac arrest due to the use of a LIFEPAK AED or a HeartSine samaritan PAD, please share your story with us. Learn more about the program and complete the Forward Hearts form at: www.physio-control.com/forward-hearts/

Physio-Control is committed to saving lives and making public access Automated External Defibrillators (AEDs) more readily available in the workplace and community. The donation of a defibrillator through the Forward Hearts program extends this lifesaving technology to even more people, offering many a better chance of survival in the case of sudden cardiac arrest.

** Forward Hearts is available to survivors saved out of hospital in a workplace or community setting by a layperson rescuer. Other exclusions apply. Please contact your sales representative for details.*
